How to use JsonParser

1. There are two ways to build JsonParser.exe
   a) Open JsonParser.sln in Visual Studio 2022 and select Build or Rebuild project. You will get JsonParser.exe
   b) Build from command line, requires only NET 6 installed

   ```
   dotnet build sources --configuration Release
   ```

2. To run JsonParser.exe from command line:

   JsonParser.exe input_file_name

   Like

   JsonParser.exe Combined_EBP-Tags All-James.csv

3. To add setpointA line into the output, copy setpoint.py to the directory with JSON files and run:

   python setpoint.py

This requires Python 3 installed in your system.
